# Responsive Design & keyframes animations

## 1. CSS media queries

CSS media queries allow you to apply styles based on the characteristics of a device or the environment displaying the web page.

CSS media queries are essential for creating responsive web pages.

The CSS `@media` rule is used to add media queries to your style sheet.

## 2. CSS keyframes

The CSS `@keyframes` rule is used to control the steps in an animation sequence by defining CSS styles for points along the animation sequence.

```
@media(max-width: 1024px){
  For iPad, tablet;
}

@media(max-width: 768px) {
  For mobile phone
}
```
